Secure Remote Connectivity for Building Automation Systems

IoTium’s vision is that security, ease-of-deployment, scalability and extensibility are the foundation to enable cloud-management of building automation systems accessible through public, private and hybrid cloud. IoTium has built a managed network infrastructure offered as a service that is easy to deploy (no truck rolls), completely secure, scalable and extensible from the ground up. It leverages certified third-party hardware such as Dell, Lanner and Advantech gateways.
