

CORNING

# Tomorrow's Network Today.

LAN, DAS, and BMS for Real Estate

At Corning, we know what glass can do. From architectural glass and glass used on interactive displays, to the glass used in the fiber optics essential in delivering virtually limitless connectivity throughout your development.

### Tenants/buyers demand high-bandwidth connectivity.

Be it a multifamily, commercial, retail, mixed use, healthcare, hospitality, industrial, or public venue, today's real estate market demands connectivity to support the "live, work, and play" lifestyle embraced by its potential tenants and buyers.

### Bandwidth is an essential part of your profit plan.

- For many, it is as essential as electricity.
- For most, it is a determining factor when deciding between properties.

All over a secure, reliable, flexible, and converged optical network.

### More bandwidth. More convenience. More customization. More content.

Corning® optical network evolution (ONE™) solutions deliver converged connectivity that's proactively managed to ensure your bandwidth is delivered for the "Internet of Things" both today and tomorrow.

Corning's 160 years of innovation history in consumer electronics, telecommunications, transportation, and life sciences provide a unique expertise in complex solutions so you can reap the technical, fiscal, and future benefits required in today's networks. Wire it once, and connect people to information, technology, and one another.
