DroneDeploy

Comprehensive Analysis of Your Commercial & Residential Facilities Portfolio with DroneDeploy

Inspection solutions for roofing, pavement, and property exteriors that improve the bottom line for annual maintenance budgets

DroneDeploy's customized inspection, analysis, and reporting tools allow managing directors to better understand, compare, and prioritize maintenance needs across a portfolio of properties.

Pavement Inspections

Prioritize repairs using automatic defect detection and measurements

- Automatically detect, measure, and analyze concrete or asphalt defects
- Determine degradation timelines and prioritize repairs using PCIs (Pavement Condition Indices)
- Generate accurate cost estimates for repairs without the need for costly, time-consuming ground surveys

Roof Inspections

Quickly assess roof conditions while safely on the ground

- Automatically detect and classify a variety of roof defects
- Get accurate roof measurements in a standardized report deliverable
- Analyze thermal imaging to identify and correct for roof penetrations and leaks

Property Exteriors

Ensure facility grounds are properly maintained

- Inspect structural elements such as windows, doors, skylights, and building envelopes to ensure correct installation and monitor current condition
- Quickly assess the location and condition of landscaping elements to direct additional resources as needed
- Monitor property signage for cracks, weathering, or burnt out lights
