

For more than 20 years, Integrated Building Solutions has collaborated with early adopters and other innovative building professionals to create connected, sustainable smart buildings. The company's experience in Master Systems Integration (MSI) spans every major facility system and subsystem, with a specific focus on tenants wellness, building performance, monitoring, and analysis.

## Integrated Building Solutions products and services are targeted to help:

### OT personnel with:

- Migrating all existing building applications to the cloud
- Setting up global Facilities Infrastructure monitoring/alarming console

### IT personnel with:

- Access to Facilities Systems Infrastructure for support and upgrades
- IT security compliance
- Easy setup and onboarding of new devices/things

### Building Tenants with:

- Access multiple existing and new building real time applications helping with managing comfort, space, obtaining information on building performance and much more

This flagship building performance platform, Intelligent Building Information System (IBIS), has been deployed in more than 24 million square feet of government, educational, financial services, and commercial real estate facilities.
