

Powering Edge-to-Enterprise

Lynxspring is changing the way devices, systems and people communicate and collaborate across the enterprise and out to the edge, creating a world *For the Intelligence of Things*.

Embracing open, interoperable IoT-based software and hardware platforms, Lynxspring designs, manufactures and distributes the JENESYS® Building Operating System (Powered by Niagara), Onyx™ automation solutions, LYNX CyberPRO cyber security technology, and the Connexion® Cloud Platform for Intelligent Buildings, Energy Management, Cyber Protection, Equipment Control and other specialty applications.

Lynxspring E2E is simplifying automation and integration across the enterprise and the edge, significantly lowering cost and enabling users to go further to manage and operate their facilities and equipment smarter, safer, securely, more efficiently and at peak performance levels.
