675 hours a year per employee[1]

That's the average time a business spends capturing and manually processing their rent roll data a year.

Rent rolls are a critical data set, but manually processing them:

- takes up lots of time
- is tediously repetitive
- leads to errors
- stops you underwriting more deals

What if you could hire a rent roll processing expert who:

- has experience at 100+ commercial real estate companies
- completes tasks instantly
- spots errors immediately
- never tires
- never stops learning
- and never quits?

Would you hire them?

Blackstone did. ING did. And so did Allianz and 100+ other companies.

Meet your new expert

PRODA automatically converts any rent roll data into the format you need. Get consistent, error-checked data all in one place, ready for analysis and upload into any system.

Get in touch to reclaim up to 95% of your time, with the added peace of mind that all your work has been checked by your new rent roll expert.
