# Telenor Connexion global managed connectivity

## - access to the whole world with just one contact

**200+** COUNTRIES

**1 POINT** OF CONTACT

**500+** MOBILE NETWORKS

## ONE

1 SIM card regardless of number of markets
1 point of contact and support for all markets
1 point for IT integration

Telenor Connexion offers global IoT connectivity for products and services in more than 200 countries. Our connectivity is based on more than 500 mobile networks across the world, a reliable technology with incomparable global coverage and quality.

Instead of buying IoT SIMs from a different network operator in each market, each with a different system,

solution and price, Telenor Connexion provides reliable global IoT connectivity with just one standardized SIM. This allows enterprises with a global presence to easily manage connectivity in multiple countries, with only one point of contact and backed up with dedicated support from connectivity experts.

## ONE One contact for the whole world

**500+** MOBILE NETWORKS

**200+** COUNTRIES

**2G,3G,4G,5G** TECHNOLOGIES

Telenor Connexion provides managed connectivity with global coverage offering 500+ networks in 200 countries in all available GSMA specified technologies. This access is provided with one SIM for the world to allow maximum simplification in the supply chain for the customer.

With one contract, Telenor Connexion provides a consolidated invoice and a one-stop-shop for support and operations.

The fleet is managed via one API and the future is secured with one consolidated roadmap.

**ONE** contract & relationship

**ONE** roadmap

**ONE** consolidated invoice

**ONE** API

**ONE** support operations centre

# IoT Connect
## – Global IoT connectivity made easy

### Service & Quality Assurance

- 24/7/365 Monitoring and Support
- Vertical Expertise, Solution Design and Applications
- Test Labs, Service Availability Reports, ....

**Global Connectivity and Cloud Services with**

- Secure E2E Data Access
- Programmable APIs
- UX Driven Design
- Data Visualization Framework

- 500+ mobile networks in 200+ Countries
- Data, SMS and Voice (2G/3G/4G)
- IoT Specific Access (LTE-M, NB-IoT, ...)
- Local Access (eUICC)

### Global Coverage

### Scale Your IoT Solution Efficiently

- One Global SIM
- Single Contract
- Single Integration
- Single Point of Contact
- Application Dash Boards
- Self Service Tools

# Why mobile connectivity?

Outstanding connectivity option when connecting a large number of products, especially over a wide geographical area.

Established, well proven and futureproof technology that has offered highly reliable connectivity and excellent service levels to companies for a long time.

### Reliable
and futureproof connectivity based on standardized technology (mobile network)

### Scalable and secure
IoT solutions – specifically built to manage large scale local and global IoT deployments.

### Easy integration
Global connectivity can be integrated already in production of products and devices.

### Cost efficiency
especially when considering Total Cost Over Time.
